

GRACE DENTAL

AIR CLEANER

The Grace Dental purifies air polluted by mercury, small swirling metal, porcelain, ceramic particles, chemical sterilants and monomers as well as bacteria and viruses from the patient's mouth in - for example - dental practises or laboratories.

FILTERING PRINCIPLE

The 3-stage filtering process of the Grace Dental ensures its optimal effect.

Phase 1: the pre-filter captures the bigger particles of dust and other polluting items such as wiring metals and porcelain.

Phase 2: the electrostatic main filter, the core of the system, catches the other, smaller, pollutants down to a size of 0.01 micron.

The ElectroMax filter in operation.

Phase 3: the specially developed mercury adsorption filter (Dental filter) eliminates the mercury vapour concentration. In addition this filter also reduces all kinds of medicinal smells and body odours.
